Retrospective Sprint 4

Supervisor: David Gregory

What worked well?

Some minor work have been done on our ETL. Especially one more source/fetcher has been implemented and integrated. Additionally we have set up a couple of more views for CouchDB.

The last week was mainly dedicated to Erlang as our examination was planned for that Friday and not much work was done then (as planned). We completed all tasks from PivotalTracker for Sprint 4 though and our first "Epic" was completed (*Stable back end and ETL up and running*).

Constraints mentioned in previous retrospective is not yet tested.

What can be improved?

We have had discussions about the over all group performance. Some members have felt that they have fallen behind both due to lack of involvement and other members working a bit in the shadows. This problem have been properly adresssed and we have ventilated solutions to communicate better the upcoming sprints.

In Sprint 5 we shall put more emphasis on documentation and define our roles to make sure that everyone understands what roles and documentation is dependant on each other.

Sprint 5 shall also include implementation of the most fundamental layout of mobile and web application. Desktop client is a step behind and we are expecting to have a draft done by the end of this iteration.
